

at least one user input area, to determine a value payout associated with an outcome of said game, to cause a second video image to be generated on said display unit, said second video image having a spatial relationship to the at least one user input area of the first video image and including a plurality of regions each having at least one unique characteristic relative to the other regions of the plurality of regions, the plurality of regions with at least one target region, to receive a signal from the sensor associated with the at least one unique characteristic of at least one of the plurality of regions, and, if the signal received from the sensor is not associated with the at least one unique characteristic of the at least one target region, to alter the position of the first and second video images relative to the sensor.

According to another aspect of the present disclosure, a method includes allowing a person to make a wager, causing a first video image to be generated on a display unit, said first video image representing a game and including at least one user input area, and determining a value payout associated with an outcome of said game. The method also includes causing a second video image to be generated on said display unit, said second video image having a spatial relationship to the at least one user input area of the first video image and including a plurality of regions each having at least one unique characteristic relative to the other regions of the plurality of regions, the plurality of regions with at least one target region, receiving a signal from a sensor associated with the at least one unique characteristic of at least one of the plurality of regions, and altering the position of the first and second video images relative to the sensor, if the signal received from the sensor is not associated with the at least one unique characteristic of the at least one target region.

Replace the paragraph beginning at page 8, line 3, with the following rewritten paragraph:

The gaming device 20 may include additional features to enhance a user's game-playing experience. For example, one or more audio speakers 46, a sound-generating circuit 48 (Fig. 2) and an aroma dispenser 50 may be positioned on the cabinet 28 as shown in Fig. 1 or in any other suitable location. The audio speakers 46 may provide various sounds relevant to the video gambling game being played on the gaming device 20. For example, the
